CHAUVET ELAN

Exactly 224 LEDs work to create rotating and crisscrossing beams in Chauvet's Elan. The beams are at a 70-degree angle, so they can be used to provide mid-air effects, as well as coverage for wide rooms and floors. The Elan features preprogrammed color changes and patterns, and offers four channels of DMX control—red, green, blue, and strobe. Color strobing and movement can be controlled with dipswitches, and knobs are included for controlling sound sensitivity for movement and color independently. Up to 20 units can be daisy-chained with the additional power output. —ML
