

AVALON CLUB

LOCATION: TORONTO, CANADA

COMPANY: CHAUVET

ACS Sound and Lighting designers utilized 82 Chauvet LEDsplash Jr. wash lights to execute a club owner's vision for "living walls" of changing hues that would match the mood of a song or a night, at will. The lights are wall-mounted behind diffusing domes in two distinct sections of the club. Chauvet's ShowXpress software controls them via DMX.

ACS owner Carlos Costa said he selected the Chauvet units for the install because of their compact size, and reliability, adding, "they are simply the best for this application, providing the most efficient and brightest output."
