

LEDs Bring Avalon Club Walls to Life

TORONTO — ACS used 82 Chauvet LED-splash Jr. wash lights to fulfill a club owner's vision of "living walls" that could change hues at any time. The lights are wall-mounted behind diffusing domes in two distinct sections of the club. Chauvet ShowXpress software controls them via DMX.

ACS owner Carlos Costa said he selected the Chauvet units for the install because of their compact size, and reliability. "They are simply the best for this application, providing the most efficient and brightest output," he said.

At Avalon, lighting proves more flexible than paint.
